

Case History - 3.750" X 2.950" XDS On 13 Chrome Plug

I know you like to get some feedback on used mills/shoes..., last week we used one of the new washover shoes to successfully mill out the 13Cr plug. See attached photo of the 13Cr plug and after photos of the washover shoe. We had already washed over the Upper Slip last year before operations were shut down. This time we ran the washover shoe on 2-1/8" motor for ~75 hours in a single run to mill the rest of the plug down to Lower Slip then we chased it downhole. Many thanks Bill for providing quality washover shoe that performed very well and did the job.

Note shoe head OD was the same as the WP OD.
