MXC Mills

MX, Matrix/Diamond - Impreg Mills with WC Inserts Added

These mills can be custom sized and shaped to fit your extreme targets. The "blades" are raised 1/2" or more from the mill face where WC carbide inserts are set in the leading edges of each diamond "Pod" that is filled full height with 30-40 mesh diamond grit that is held in place by the furnace infiltrated Matrix (not torch-made). The inserts become an integral part of the matrix and cannot be lost out of the mill face even when fractured.
